EDUCATION

Rice University

Houston, TX

B.S. in Computer Science; Minors in Data Science and Statistics; GPA: 3.9/4.0, Cum Laude

May 2026

- Honors: Distinction in Research and Creative Work (Statistics); President's Honor Roll (Spring 2025, Fall 2025, Spring 2026).

EXPERIENCE

Software Engineer

June 2026 – Present

OmniScience

Houston, TX

- Develop Python and Django data-ingestion pipelines and backend services for Vivo, an agentic AI platform that unifies clinical-trial data and produces traceable, real-time insights.
- Built reusable SDK transformations to standardize trial-visit data across multiple repositories, adding canonical fields while preserving clinically meaningful source values and reducing duplicate mapping logic.
- Added unit tests and coordinated multi-repository changes while debugging PostgreSQL, Docker, and API integrations across application and core databases.

Data Science and Bioinformatics Intern

January 2026 – May 2026

McWilliams School of Biomedical Informatics, UTHHealth Houston

Houston, TX

- Continued development of **BRAINCELL-AID** through Python/MySQL data pipelines, result validation, and manuscript contributions for an LLM- and RAG-assisted system that annotated 5,322 brain-cell clusters.
- Co-authored a research paper reporting 77% correct top predictions; also supported a separate forced vital capacity (FVC) research project through Python analysis and manuscript preparation.

CPRIT BIG-TCR Cancer and Artificial Intelligence Summer Intern

June 2025 – August 2025

McWilliams School of Biomedical Informatics, UTHHealth Houston

Houston, TX

- Engineered and optimized a five-layer MLP in Python and TensorFlow for antibody-protein binding prediction, applying cross-validation, L2 regularization, and hyperparameter tuning to achieve 85%+ accuracy.

Computer Science Teaching Assistant

August 2023 – May 2026

Rice University

Houston, TX

- Supported 800+ students across four computer science courses through office hours, discussion-board responses, code reviews, and assessment grading.
- In the most recent course, mentored 10 teams across two projects in Go and TypeScript, advising on concurrency, synchronization, API design, debugging, and performance optimization.

Live Instructor Technology Intern - RCEL ELITE Tech Program

May 2024 – July 2024

Rice University

Houston, TX

- Designed and delivered 40+ interactive sessions in machine learning, robotics, and 3D modeling while adapting technical instruction for high-school students with varied experience levels.

Computer Hardware Engineer & Mission Assurance Specialist

May 2023 – August 2023

NASA L'SPACE Program - Arizona State University

Remote

- Collaborated on an 11-person robotic mission concept for Ceres, designing command-and-data-handling architecture, software interfaces, and mission-risk analyses aligned with NASA review standards.

PROJECTS

Genome Short-Read Mapper | *Python, Bioinformatics, Multiprocessing*

Aug – Dec 2025

- Built a read-mapping pipeline from scratch to parse FASTA/FASTQ files, generate k-mer seeds, identify candidate alignments, validate results against ground truth, and accelerate workloads with multiprocessing.

OwlDB: NoSQL Document Database | *Go, TypeScript, REST, SSE*

Aug – Oct 2024

- Built a concurrent document database with CRUD REST APIs, skip-list indexing, schema validation, and real-time client updates through Server-Sent Events.

Locality-Sensitive Hashing Analysis | *Python, scikit-learn*

Sep – Dec 2024

- Benchmarked signed-random-projection and k-means LSH methods on 18,000 text documents, evaluating precision, query time, and memory tradeoffs.

FDA Adverse Events Analysis | *Python, Pandas, scikit-learn*

Jan 2024

- Won the Best Underclassmen Award for analyzing the FDA CAERS dataset and modeling consumer-product safety risks.

TECHNICAL SKILLS

Languages: Python, Java, Go, TypeScript, JavaScript, C, SQL, R, HTML/CSS

Frameworks/Libraries: Django, React, Node.js, TensorFlow, PyTorch, Pandas, NumPy, scikit-learn, PySpark

Data/Cloud: PostgreSQL, MySQL, MongoDB, Hadoop, AWS, Google Cloud Platform (GCP), Google Cloud Storage (GCS), Docker

Developer Tools: Git, GitHub, Jira, Linux, Postman, DBeaver, VS Code, IntelliJ, PyCharm, LaTeX
